**Gene:** *Nkain4*

**Common name:** M076C04

**Allele:** *Nkain4*<sup>Gt(M076C04)Vmel</sup>

## Genotyping Information

Genotyping by end-point PCR based on gel is composed of a genespecific short range PCR using primers on wild type allele and a mutant allele-specific short range PCR. The combined results show the genotype of the mice. For example: mutant positive, wild type positive = Heterozygous.
