1. Genotyping protocol and data2

 1.1. Genotyping strategy2

 1.2. PCR protocol4

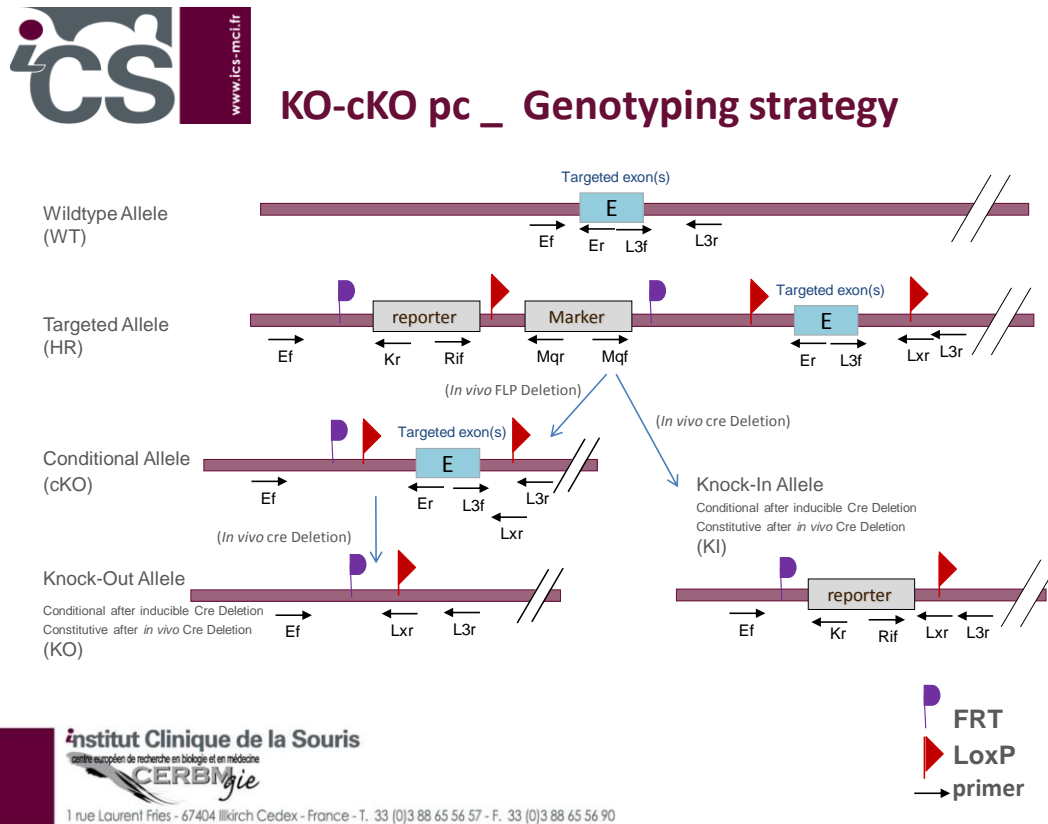

2. Cre and Flp genotyping method5

1. Genotyping protocol and data

This section describes the condition used at the Mouse Clinical Institute (ICS) to genotype your **Tmem108** Constitutive Knockout / Conditional Knockout (KO-cKO x Cre) project.

1.1. Genotyping strategy

The map below describes the position of the primers used for genotyping for each possible allele.

Sequence of primers used for genotyping:

Position	Primers	Sequence
Ef	6843	CTCTGGGGTGCCAGGAACAGAA
Er	6844	TCTACCTCAGTGCATCACCTTGGGA
Kr	3277	CTCCTACATAGTTGGCAGTGTGGG
L3f	6845	TGTGAGTACCCAGCTCTCTCCCCTC
L3r	6846	CCATGGTGTCTTGGTGCCTAATCA
Lxr	5079	GGCGAGCTCAGACCATAACTTCGTATA
Lxr ²	3255	ACTGATGGCGAGCTCAGACCATAAC
Ri1f	5966	GCACATGGCTGAATATCGACGGT

²: for a selected position, a second primer was designed

PCR fragments expected size (bp):

Region analyzed	Primers used	Position on the primer (see the map above)	Targeted allele (HR)	conditional allele (cKO)	KO allele	WildType allele
5' part of the selection marker	6843-3277	Ef / Kr	421	---	421	---
Presence of the distal loxP	6845-6846	L3f / L3r	417	417	---	361
Distal loxP specific PCR	6845-5079	L3f / Lxr	268	268	---	---
Excision of the selection marker	6843-6844	Ef / Er	6214*	555	---	387
Cre total excision	5966-3255	Ri1f / Lxr ²	4479*	---	471	---

*: this PCR product will not be observed using our PCR genotyping conditions (see description below)

** : this PCR is only verified if mice are generated

---: no Amplicon should be obtained

1.2. PCR protocol

This section describes the composition of the mix and cycling conditions used for genotyping.

Reagents:	Volume:
- FastStart PCR Master (Roche)	7.5µl
- DNA (50ng/µl)	1.5µl
- 5' primer (100 µM)	0.06µl
- 3' primer (100 µM)	0.06µl
- Sterile H ₂ O	up to 15 µl

Cycling conditions:

Temp	Time	#Cycles
95°C	4min	1
94°C	30s	34
62°C	30s	
72°C	1min	
72°C	7min	1
20°C	5min	1

NB: These PCR conditions have been optimized for high-throughput genotyping. Adaptation to small-scale may be required.

2. Cre and Flp genotyping method

You will find the genotyping protocol in the publication:

[Highly-efficient, fluorescent, locus directed cre and FlpO deleter mice on a pure C57BL/6N genetic background.](#)
