

EMMA ID: 13463

Gene: *Shank2A(R462X)*

Common name: *TgShank2A(R462X)*

Genotyping Information

Genotyping by end-point PCR based on gel is composed of a genespecific short range PCR using primers on wild type allele and a mutant allele-specific short range PCR. The combined results show the genotype of the mice. For example: mutant positive, wild type positive = Heterozygous.
