

TOUR RACK – TR1-D

Tour Rack TR1-D is a fully featured high power DSP enabled amplifier rack, designed to integrate with Vero, Evo and Vero VX touring systems. The rack itself features a robust yet lightweight shock mounting system, durable PU coating and captive slam latch doors which stow at the top of the rack whilst in use.

3 x Funktion-One D100Q-DSP-D amplifiers provide 12 channels of high power, high definition amplification with XTA DSP on all channels, analogue, AES and Dante I/O.

RP-Signal-1, paired with an industry standard network switch, enables fast and effective deployment of distributed AoIP with analogue failover whilst RP-Speaker-1 gives simple access to all amp channels on NL4 and NL8 connectors.

VMP-3P mains distro supplies each amplifier with individual MCBs and aux outlets for network switch and ancillary equipment.

- Features:
- Robust, PU coated birch ply construction
  - Fully shock mounted
  - Captive slam latch doors
  - Recessed handles
  - Wide footprint wheel pockets for secure stacking
  - 12 channels of high power DSP enabled amplification
  - Captive 25pin tourline signal cables
  - Simple network patching for control and Dante distribution
  - Simple speaker patching on NL4 and NL8
  - BOB-8S also available for comprehensive connectivity options
  - ‘Loop through’ channels useful for AES, comms, RS485 etc.
  - Flying version also available

Load (per channel)	Output Power (per channel)
8Ω	1400W
4Ω	2700W
2.7Ω	3700W
2Ω	3500W

- Weight: 133kg (293lbs)
- Power: 3-phase 230/400V 50Hz
- Current: average 7.5A, max 20A per phase
- Amplifier channels: 12 channels
- Analogue audio: 6 channels
- Network audio: Dante 12 channels
